Dear Sir/Mam,

When I started to explore the world of programming I got fascinated by the way Python solved complex problems in simple ways, It instilled in me a passion for coding and here I am applying for the role of Software developer at GÉANT hoping that it will inspire me as Python did and challenge me every day to help me reach an extra mile in my chosen road of passion.

When I read about GÉANT, the one thing that inspired me the most was the vision of the company, I can see that GÉANT has been helping out many people connect and grow in some way. I always wanted to be a part of a company which not only helps me grow but also contributes in some way to society. And that is not the only reason why I want to become a part of the company, I am passionate about building mobile and web applications and GÉANT's tech stack seems to be aligned with the things that I want to do and learn about.

When I started my career as an Intern at Zodhya, I got the opportunity to lead a team of six members while working in a data integration tool developed which helped me to improve my leadership skills. At Payoda Technologies, I was assigned a project to develop a web application which packages the local project, finds dependencies and performs GIT operations using GUI. Since it was only me who had worked with web frameworks in my team earlier I had to work on it alone in a shorter period which made me a hard worker. It was when I worked at Vunet Systems I got exposure to data analytics in Python as we were working on an IT monitoring tool which analyses a huge amount of data in different forms providing visualizations. Vunet made me learn time management, enjoy working under pressure and remain a lifelong student. My work at Tama Systems which is a German-based company introduced me to the automotive domain where I developed automation scripts and an internal ERP tool. It helped me to adapt to the German work culture making me more productive. Thorgate gave me a diverse work experience where I learned to test my abilities and learn and grow beyond my limits. My daily tasks include designing features, implementing, testing, and deploying using varied tech stacks. I have included the technical part of my work experience in my resume.

As I have worked with huge companies to a four-member startup I have exposure to various work environments and diverse teams, I feel that I could become a great fit for any team of any size and culture. I believe that my technical experience will also be a great contribution to the team.

I want my future employer to provide me with a space to explore new stuff and keep me excited to work every day looking forward to solving a real-world problem. I was impressed by the work of GÉANT and I feel that I will be the best fit for GÉANT as I find the projects and the vision exciting and aligned with my passion because of which I will be happily obliged, determined and will work hard adding value to the team.

Thank you for your time and consideration.

Sincerely,
Akshaya
